

Giving your In-line vaccines the support they need to work effectively

# Vacci-Guard®

## KEY BENEFITS:

Vaccines will have stronger survivability when VACCI-GUARD is used.

VACCI-GUARD contains a blue food-grade dye so it is visible when it goes through the water lines. It will also temporarily stain the beaks, tongues and feathers of the birds that have consumed it, helping to evaluate the number of vaccinated birds.

VACCI-GUARD has research data to substantiate its claim that it reduces the negative effect of chlorine and stabilizes the vaccine in water.

All vaccination programs should include **VACCI-GUARD** to minimize residual chlorine and other compounds that may reduce effectiveness of the vaccine being administered.

Manufactured by:

**GUARANTEED ANALYSIS**

Crude Protein, minimum.....14.00%  
 Crude Fat, minimum.....0.50%  
 Crude Fiber, maximum.....0.15%

**INGREDIENTS**

Animal Protein Products, Artificial Coloring  
 (FD and C Blue No. 1).

**MIXING INSTRUCTIONS**

*Keep sealed until ready to use. Use entire contents immediately after opening to prevent contamination. If the entire contents are not immediately used, close the bag with the best possible airtight seal to maintain product quality and freshness.*

**DRINKING WATER TANK:**

Mix 1 kg of VACCI-GUARD per 220 liters of waters

**IN-LINE MEDICATORS:**

- To make stock solution if chlorine level is less than 1 ppm:  
 For each 10 liters of water - mix 3.75 kg of VACCI-GUARD
- To make stock solution if chlorine level is more than 3 ppm:  
 For each 10 liters of water - mix 6 kg of VACCI-GUARD
- Set proportioner to dispense 100 ml of stock solution per 10 liters of drinking water

**Store in a Cool Dry Place**
